# Excel Funktion Verketten2

Um in einer Zelle mehrere Zellen zu verketten/verbinden kann man sich ein kleines Makro schreiben.

verketten2.bas

```
Function Verketten2(ByRef bereich As Range, Trennzeichen As String) As
String
    Dim rng As Range
    For Each rng In bereich
        If rng <> "" Then
            Verketten2 = Verketten2 & rng & Trennzeichen
        End If
    Next
    If Len(Verketten2) > 0 Then _
        Verketten2 = Left(Verketten2, Len(Verketten2) -
Len(Trennzeichen))
End Function
```

## Eigene Excel Funktionen in StandardMappe verfügbar machen

<todo>Das folgende muss noch überarbeitet werden</todo>

### How to quickly create an empty add-in for excel 2007

- Save a blank workbook as a Excel Add-In (*.xlam) in your Add-In folder. (%APPDATA%\Microsoft\AddIns\Custom.xlam) I named it *CUSTOM.xlam.*
- Click Office button.
- Click „Excel options“ button.
- Click „Add-Ins“ tab.
- Select Excel Add-ins.
- Click „Go…“ button.
- Click „Browse..“ button.
- Select CUSTOM.xlam.
- Click OK.
- Make sure CUSTOM is enabled in Add-In Manager.
- Click OK.

### Add custom functions to your personal add-in

- Click „Developer“ tab on the ribbon.
- Double click on Myfunctions.xlam in project window.

- Click „Insert“ tab.
- Click Module.
- Copy and paste custom functions and macros to code window.

## How to use custom functions in an Add-In

- Select a cell.
- Type the custom function name in formula bar. Press Enter.
- If you don´t know the name of your custom function, continue to step 3.
- Click „Insert Function“ button.
- Select category „User Defined“.
- Select your custom function.
- Click OK.

## How to use macros in an Add-In

- Click „Developer“ tab.
- Click Macros button.
- Type the name of your macro.
- Click „Run“ button
